                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence:
                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. 1s the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes the isolation of the novel human nuclear receptors nRR7 or nRR7-1. The nRR7 and nRR7-1 proteins are useful in the identification of downstream target genes and ligands regulating its activity. The nuclear receptor is involved in the regulation of in vivo cell proliferation and/or cell development. The nRR7 and nRR7-1 polynucleotides, expression vectors and host cells are useful for the recombinant production of the protein.
                                                                                                                                                                                                                                                                                                                   treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human intranuclear receptor protein. The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New intranuclear receptor protein - useful diagnosis and treatment of disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 1999-350330/30

The protein can be used for the development of drugs and diagnosis and treatment of various diseases.

polypeptide. Human VDRR polypeptides and substances which affect VDRR c signal transduction, can be used for treating metabolic, proliferative or inflammatory conditions. They can be used in the manufacture of a cc medicament for treating the following conditions: obesity, diabetes, can one can be used in the manufacture of a cc medicament for treating the following conditions: obesity, diabetes, can orexia, lipoprotein defects, hyperlipidaemia, hypercholesterolaemia or hyperlipoproteinaemia and osteoporosis, rheumatoid arthritis, benign and conditions in the capable of vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, capable of transforming a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or cantagonist can be used for the manufacture of a medicament for treating metabolic, proliferative or inflammatory condition.

ON N.B. The specification specifically claims the VDRR nucleic acid and condition of the specification in figures 1, 4, 7 and 8, but no figures to the condition of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a human vitamin D receptor related (VDRR) polypeptide. Human VDRR polypeptides and substances which affect signal transduction, can be used for treating metabolic, prolifer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New vitamin D receptor related (VDRR) polypeptides, useful fo treating obesity, diabetes, anorexia and rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (PHAA ) PHARMACIA & UPJOHN AB.

The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment of various diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A human intranuclear receptor protein

             This invention describes the isolation of the novel human nuclear receptors nRR7 or nRR7-1. The nRR7 and nRR7-1 proteins are useful in the identification of downstream target genes and ligands regulating its activity. The nuclear receptor is involved in the regulation of in vivo cell proliferation and/or cell development. The nRR7 and nRR7-1 polynucleotides, expression vectors and host cells are useful for the recombinant production of the protein.

The present sequence represents a human intranuclear receptor protein. The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment of various diseases.
                                                                                   New intranuclear receptor protein - useful for drug development diagnosis and treatment of disease % \left\{ 1,2,\ldots ,n\right\}

New vitamin D receptor related (VDRR) polypeptides, useful for treating obesity, diabetes, anorexia and rheumatoid arthritis

Claim 19; Page 19-20; 35pp; English.

The present sequence is a human vitamin D receptor related (VDRR) polypeptide. Human VDRR polypeptides and substances which affect VDRR signal transduction, can be used for treating metabolic, proliferative or inflammatory conditions. They can be used in the manufacture of a medicament for treating the following conditions: obesity, diabetes, anorexia, lipoprotein defects, hyperlipidaemia, hyperchaperotalizamia and osteoporosis, rheumatoid arthritis, benign and hyperlipoproteinsemia and osteoporosis, rheumatoid arthritis, benign and malign tumours, hyperproliferative skin disorders or hyperthyroidism. Nucleic acid vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, be used for treating a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or antagonist can be used for the manufacture of a medicament for treating metabolic, proliferative or inflammatory condition.

N.B. The specification specifically claims the VDRR nucleic acid and polypeptide sequences given in figures 1, 4, 7 and 8, but no figures are given in the specification.

CC SXR (steroid and xenoblotic receptor). SXR (1) forms a heterodimer with CC retinoid x receptor (RXR), (11) binds to a direct or inverted repeat CC transcription through response element motif based on the half-site AGTTCA, (11) activates CC transcription through response elements present in steroid-inducible P450 CC genes, in response to a wide variety of natural and synthetic steroid CC demonses and (10) is prominently expressed in liver and intestine. SXR CC regulates expression of catabolic enzymes, in response to many different CC steroids, and thus affects metabolism. SXR is a broad specificity, low-CC affinity receptor for reducing excessive levels of steroids in the CC circulation. (Ant)agonists of SXR are used to regulate metabolism of CC cases of tuberculosis (treated with rismpin and related compounds), in cases of tuberculosis (treated with tamoxifen, raloxifen etc.), or osteoporosis (treated with steroid levels are excessive (e.g. cc labsylaroxiase deficiency, or breast, colorectal or prostatic ovarian (cc dehydrogenase deficiency, or breast, colorectal or prostatic cancer), while antagonists are used where endogenous steroid levels are too low. CC clis that express SXR are used to identify compounds likely to be involved in undesirable drug interactions. Antibodies specific for SXR ante used in the present sequence represents SXR polypeptide.

GENERAL SERVICE SERVIC

S

The invention provides an isolated human nuclear receptor (designated pregnane X receptor, PXR) that binds to a cytochrome P-450 mono-oxygenase (CYP) promoter. The hPXR is used to identify: its specific modulators, and compounds that induce CYP3A4 expression (i.e. to identify drug interactions, since CYP3A4 is involved in many biotransformations of drugs). The modulators are potentially useful for: associating particular

diseases and

conditions

treating such

```
New human pregnane X^{\text{T}} receptor, used to identify specific modulators and agents that induce expression of cytochrome P-450 mono-oxygenase -

The modulators are potentially useful for: associating particular diseases and conditions with PXR and for treating such conditions. Antibodies raised against hPXR can be used for determination and purification of hPXR. The present sequence represents a histidine-6 tagged partial TXR (His6-PXR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human pregnane X receptor, used to identify specific modulators agents that induce expression of cytochrome P-450 mono-oxygenase
                                                                                                               Key

It shows 73% identity in the DNA binding domain, and 42% identity in the ligand binding domain, to the human vitamin D receptor. Recombinant XOR-6 can be expressed in animal cells: a cDNA clone (T36499) coding for XOR-6 has been isolated. The recombinant XOR-6 may be used to regulate gene transcription or to raise antibodies of diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding receptor polypeptide responsive to hydroxy, mercapto amino benzoate(s) - useful to regulate gene transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes rat vitamin D receptor (VDR) isoform protein VDR1. The present egguence represents rat VDR0. VDR1 differs from the canonical form of VDR (VDR0) by lacking the amino acid sequence encoded by exon 9, but instead substitutes a short sequence (GTEPGREELRDIGHYGDCE in the rat protein) encoded by the 5'-end of intron 9. VDR1 has a dominant negative effect on the vitamin D signalling pathway. The isoform protein can be used for determining bone density, and for the screening of compounds (e.g. steroids and retinoic acid derivatives) for vitamin D activity (e.g. as bone calcium regulators, immunosuppressants or anticancer agents).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Seguence

The isoform differs from the normal receptor (YDR0), which comprises the present sequence, in having the vitamin D response element curtailed by 86 residues, and having an extra 19 residues inserted at the C-terminal of this element. It

//note="Corgan: pooled; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NBHL19W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and s circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729996-731399. Subtraction by Bento Soares and M. Fattma Bonaldo. "

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score
